# Enhancing the Climate Change Benefits of Urban Trees in Cambridge

**Ben Hockridge** 

www.adas.co.uk

Wilson, L. A., Davidson, R., Coristine, H., Hockridge, B. & Magrath, M.

## **Benefits of urban trees**

- Reduction of air pollution
- Increased shade and cooling
- Increased carbon sequestration
- Reduced flood potential
- Improved health and wellbeing

## **Policy background**

- The Trees in Towns II Project (Britt & Johnston, 2008)
- Read report (2009)
- The Natural Environment White Paper (2011)
- National Planning Policy Framework (2012)

## Aims for the study

- Inform Council policy regarding desired canopy cover targets and add weight to any tree management policy
- Cost-effective target tree planting in areas of low canopy cover
- Identify areas of unprotected trees with large canopies
- Provide a baseline to measure future changes in tree stock quantity and quality
- Set measureable targets for canopy cover in the City
- Inform the Council on the health and fitness of its stock with respect to risks from climate change

## Methodology

- Digital tree map layer (ProximiTREE<sup>™</sup>) details the spatial location, height and canopy area of individual trees
- City wards, land use classification and land ownership areas
- Ground survey
- Canopy growth model

| Land use class                               | Number of<br>trees (%) | Canopy<br>cover (%) | Land area<br>(%) | Tree Density<br>(Trees ha <sup>-1</sup> ) | Canopy<br>Density<br>(m <sup>2</sup> ha <sup>-1</sup> ) | Average<br>canopy size<br>(m²) |
|--|------------------------|---------------------|------------------|---|---|--------------------------------|
| Low Density Residential                      | 6.9                    | 9.6                 | 3.9              | 58.7                                      | 4171  | 71.1                           |
| Medium Density Residential                   | 53.3                   | 37.6                | 31.4             | 55.7                                      | 2015  | 36.2                           |
| High Density Residential                     | 4.3                    | 3.9                 | 4.2              | 33.7                                      | 1728  | 51.3                           |
| Town Centre and Commercial                   | 5.3                    | 5.9                 | 7.7              | 22.9                                      | 1311  | 57.2                           |
| Industrial Areas                             | 2.6                    | 2.0                 | 4.5              | 19  | 752   | 39.6                           |
| Formal and informal open space               | 5.0                    | 8.1                 | 6.4              | 26  | 2147  | 82.6                           |
| Institutional open space                     | 11.5                   | 17.3                | 16.1             | 23.8                                      | 1836  | 77.1                           |

## Results – Canopy spread

LAND USE CLASSIFICATION

## Results – Growth model

| Year     | Canopy area (m <sup>2</sup> ) |
|----------|-------------------------------|
| 1        | 0.79                          |
| 2        | 1.57                          |
| 3        | 2.92                          |
| 4        | 4.98                          |
| 5        | 7.91                          |
| 10       | 37.55                         |
| 15       | 83.99                         |
| 30       | 336.53                        |
| 25% Loss | 252.40                        |

| Current Canopy Cover (m <sup>2</sup> ) | 6,961,907 |
|--|-----------|
| Future Canopy Cover (m <sup>2</sup> )  | 7,780,214 |
| % increase in Canopy Cover             | 11.75%    |
| Current Canopy Cover as % of land area | 17.08%    |
| Future Canopy Cover as % of land area  | 19.08%    |
| Actual % increase in Canopy Cover      | 2.01%     |

Current and projected canopy characteristics

Canopy area prediction

## **Discussion – Planting strategy**

- Need for partnerships, guidance and schemes advising local residents on how they can increase canopy cover
- Scope for increasing tree density on industrial land

Maximising the canopy cover

## **Discussion – Ground survey**

- Ground survey results provided a reasonable comparison with canopy density from ProximiTREE
- Good baseline against which future changes in the city's tree characteristics can be assessed
- Ground survey allowed for identification of tree species

## Discussion – Comparison with Trees in Towns II

- Trees in Towns II survey obtained an estimate of urban tree stock in towns and cities across England
- Tree densities in Cambridge, estimated from ProximiTREE data, were lower than tree densities estimated by the TTII study for other large towns, while canopy densities were higher
- Indication that Cambridge has a more mature stock of trees compared to other English towns and cities

Communities

Chris Britt & Mark Johnston

Irees in Towns I

A new survey of urban trees in England and their condition and management

### **Recommendations**

- It is recommended that planting strategies are targeted by ward and land-use to attain city average canopy covers within each category
- Increase in canopy cover from 17.1% to 19.1%

## **Suggested outcomes from study**

Strategic management

New planting

Protection

Maintenance
