Ash dieback is now 'unstoppable', ecologists warn

Experts say Britain's ash trees are 'doomed' and their demise threatens hundreds of insects, mosses, lichens and birds

facebook 

twitter 

The Daily Telegraph

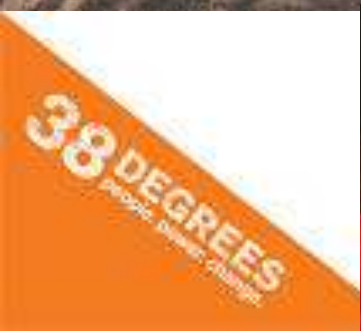

Tree-killer fungus 'impossible to stop' as it sweeps Britain with ash dieback disease found in 500 areas a year after first outbreak

- Disease out of control in the East and South East of England
- Somerset confirmed as the 15th English county with the fungal disease
- Outbreaks in Wales, Scotland and Northern Ireland
- Of infected sites in Britain, more than half linked to imported ash trees

Caring

"S is easily distracted and can lack focus"

Understanding

Understanding

*"F is a lively participant in class,
and has great potential."*

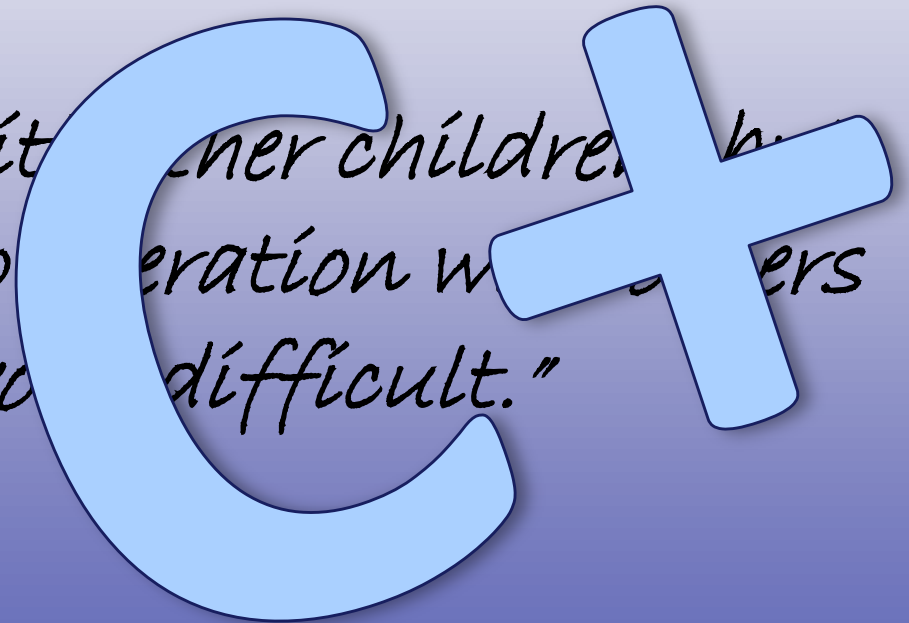

Responding

- Sector responds well to a crisis
- Lack of diversity in the sector can lead to 'all or nothing' response
- FC no longer dominant – who leads?
- Heavily dependent on financial position

Responding

"F has useful speed when he runs in the right direction."

"F can play well with other children. He sometimes finds cooperation with others in group-work difficult."

Adapting

"Shows promise"

Adapting (Untested)

Conclusions

- UK forestry system has demonstrated its adaptability and resilience
- Resilience will always be dependent on economics
- Financial support from the state requires public concern
- Sectoral change is compounding factor – who leads?

Thank you
